For Immediate Release

Software to Rapidly Create Augmented Reality Training Launches at I/ITSEC

Orlando, Florida (November 29, 2016)

Modest Tree announces today that their Modest3D-Explorer software, used for rapid creation of 3D interactive presentations, now includes augmented reality publishing. Modest Tree is proud to be the first firm to offer a rapid development tool for the creation of augmented reality training. With Modest3D Explorer, users can develop augmented reality sales and training applications by constructing a slideshow composed of 3D animations, text, or other content.

This software is ideal for instructional training, on the job performance support, demonstrating assembly and disassembly of equipment and showcasing sales and marketing demonstrations on commercial products.

Modest Tree is providing the first look into the Modest3D- Explorer, complete with augmented reality publishing, at I/ITSEC (Booth 2267) in Orlando this week.

About Modest Tree

Modest Tree is an award-winning modeling, training and simulation company located in Halifax, Nova Scotia. The company has built a strong relationship within the Aerospace and Defence industries in North America for both their Modest3D suite of tools and their client focused custom training solutions. Modest Tree is recognized as a 2015 and 2016 Top Simulation and Training Company by Military Training and Technology Magazine.
